Indigo is an in-progress mod for Ocarina of Time that aims to be a full game replacement, with new items, enemies, bosses, maps, and story. Play as the Hero of Time following the events of Majora's Mask in the child timeline! The story is set 27 years after the events of MM. There are currently two public demos. If you want to play Chapter 1, there is a link to it on the releases page. It's not as polished or fleshed out as Chapter 2, but there's still some unique content there for those interested!
